

Drive Table-Top Compressor 18450

Drive 18450 CHAD® 50 PSI Compressor

The 50 PSI Compressor by Chad from Drive Medical is an ultra-powerful compressor for humidification and high flow, high pressure nebulization of viscous medication.

Effective: It is perfect for patients who require humidification and additionally need to receive medication by means of nebulization. This piston-operated PSI Compressor is quiet due to the unique WOB-L piston while providing continuous high pressure. Due to its technology, the compressor is able to deliver the medication via aerosol at a particle size of less than 2 microns.

Convenient: The compressor's pressure gauge is very clear and easy-to-read, making it easily accessible and simple to use. It is durable, lightweight, and easy to clean. A removable door protects the device's components.
